

Installation Guide - Swimming Pool Covers

Installation Guide: Leaf Net Pool Covers for In-ground Pools

- Place the leaf net over your pool, ensuring it rests on the water surface and extends over the pool deck by approximately 2 feet.
 - Fill each water tube with water.
 - Insert the filled water tubes into the Velcro straps provided along the edge of the cover.
 - Fasten each water tube with a Velcro strap, securing the cover to the pool deck.
 - Make sure the water tubes cover the entire perimeter of the net to prevent wind from infiltrating underneath and causing it to billow or flap.
- In regions with extreme cold, fill the water tubes only halfway to accommodate ice expansion.

Caution: Billowing or flapping of the cover in windy conditions may result in severe damage to the leaf net. Ensure the water tubes are placed end to end, as shown.

Swimming Pool Safety Precautions to Prevent Injury or Drowning

- Be aware that this is an anti-leaf cover, not a safety cover.
- Keep children away from the pool cover.
- The pool cover is not designed to bear any weight.
- Properly secure the pool cover to avoid potential hazards.
- It is recommended not to walk on the pool cover or use it for support.
